NTRglobal Today at GITEX in Dubai

The company debuts its Web-Based solutions in the Gulf Region

Dubai, September 8, 2007 – NTRglobal (www.ntrglobal.com), a technology company specialized in the creation and implementation of innovative Web-based and remote collaboration solutions, today debuts its product line at GITEX in Dubai.

In May of this year, NTRglobal opened its Dubai City office to serve the growing and dynamic business market in the Gulf Region. To build on its momentum, NTRglobal local representatives will be at GITEX, Hall 8 Stand B8-19 from today until September 12, delivering live, hands-on demonstrations of its technical support, IT administration, and remote access solutions.

“We’re excited to talk to people face-to-face about our solutions and give them a chance to see for themselves how easy-to-use and truly practical our solutions are”, observes Sachin Shah, Senior Account Manager. “Small and large companies in almost any business sector will be able to see how our solutions can improve their day-to-day efficiency and save them time and money.”

NTRsupport (www.ntrsupport.com) is a remote technical support solution that lets IT support technicians quickly connect to customer computers to fix problems faster. NTRsupport requires no previous installation and enables remote control sessions with Windows and Linux-based PCs, Macs and MacIntels, and even Pocket PCs.

NTRadmin (www.ntradmin.com) is an IT Administrator’s best friend. By centralizing the management of a company’s IT assets, automating repetitive tasks, and enabling remote control of employee computers, NTRadmin delivers huge productivity gains and the cost savings that naturally follow.

NTRconnect (www.ntrconnect.com) is an easy-to-use remote access service used by individuals and professionals across more than 100 countries to access files, e-mail, and networks through their remote computers. NTRconnect is a solution that offers convenience and facilitates true mobility.

All NTRglobal solutions employ stringent security measures to protect user privacy and data, chief among these measures is the use of 256-bit AES encryption for all data communications.

Anyone interested in these solutions is invited to visit NTRglobal this week at GITEX in Hall 8, Stand B8-19 for a demo or to visit the product websites where they can register for a free trial.

For more information about NTRglobal’s presence at GITEX, contact Andrea Canto (acanto@ntrglobal.com).
